### Technical data

**Electrical data**
- **Nominal voltage**: AC 24 V, 50/60 Hz / DC 24 V
- **Nominal voltage range**: AC 19.2 ... 28.8 V / DC 21.6 ... 28.8 V
- **Power consumption**
  - In operation: 15 W @ nominal torque
  - At rest: 2 W
  - For wire sizing: 26 VA (I max. 20 A @ 5 ms)
- **Connection**: Cable 1 m, 3 x 0.75 mm²

**Functional data**
- **Torque (nominal torque)**: Min. 16 Nm @ nominal voltage
- **Direction of rotation**: Reversible with switch 0 resp. 1
- **Manual override**: Gearing latch disengaged with pushbutton, can be locked
- **Angle of rotation**: Max. 95°<4, can be limited at both ends with adjustable mechanical end stops
- **Angle of rotation limiting**: min. 30°<4
- **Running time**: 7 s / 90°
- **Automatic adjustment of operating range to match the mechanical angle of rotation**: Manual triggering of the adaption by pressing the «Adaption» button
- **Sound power level**: 63 dB (A)
- **Position indication**: Mechanical, pluggable
- **Negative torque**: ≤50% from nominal torque (Caution: can only be used with restrictions. Please contact your Belimo representative.)

**Safety**
- **Protection class**: III Safety extra-low voltage
- **Degree of protection**: IP54 in any mounting position
- **EMC**: CE according to 2004/108/EC
- **Certification**: Certified to IEC/EN 60730-1 and IEC/EN 60730-2-14 cULus according to UL 60730-1A and UL 60730-2-14 and CAN/CSA E60730-1:02
- **Mode of operation**: Type 1
- **Rated impulse voltage**: 0.8 kV
- **Control pollution degree**: 3
- **Ambient temperature**: –30 ... +40°C (no restrictions) +40 ... +50°C (Caution: can only be used with restrictions. Please contact your Belimo representative.)

### Dimensions / Weight
- **Dimensions**: See «Dimensions» on page 3
- **Weight**: Approx. 1.7 kg
Safety notes

- The actuator is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- It may only be installed by suitably trained personnel. Any legal regulations or regulations issued by authorities must be observed during assembly.
- The device may only be opened at the manufacturer’s site. It does not contain any parts that can be replaced or repaired by the user.
- The cable must not be removed from the device.
- Adaptation is necessary when the system is commissioned and after each adjustment of the angle (press the adaptation push-button).
- When calculating the required torque, the specifications supplied by the damper manufacturers (cross section, design, installation site), and the air flow conditions must be observed.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Simple direct mounting
Simple direct mounting on the damper spindle with a universal spindle clamp, supplied with an anti-rotation strap to prevent the actuator from rotating.

Manual override
Manual override with push-button possible (the gear is disengaged for as long as the button is pressed or remains locked).

Adjustable angle of rotation
Adjustable angle of rotation with mechanical end stops. A minimum permissible angle of rotation of 30° must be allowed for.

High functional reliability
The actuator is overload-proof, requires no limit switches and automatically stops when the end stop is reached.

Home position
The first time the supply voltage is switched on, i.e. during initial startup, the actuator carries out an adaptation. After pressing the «gear disengagement» pushbutton, the actuator moves to the home position at the end stop.

<table>
<thead>

<th>Pos. Direction of rotation</th>
<th>Home position</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>ccw</td>
</tr>
<tr>
<td>1</td>
<td>ew</td>
</tr>
</tbody>
</table>

The actuator then moves into the position defined by the control signal.

Adaption and synchronisation
During adaptation, the upper and lower spindle end stop is recorded and deposited in the actuator. Detection of the mechanical end stops enables a gentle approach to the end positions and thus protects the actuator mechanism. During synchronisation, the actuator moves to the home position for angle referencing. This ensures correct position regulation.

Accessories

### Electrical installation

#### Wiring diagram

Note
- Connect via safety isolation transformer.
- Parallel connection of other actuators possible.
  Note performance data for supply.

#### Direction of rotation

- 1 = black
- 2 = red
- 3 = white

### Operating controls and indicators

1. **Direction of rotation switch**
   - Switching over: Direction of rotation changes

2. **Push-button and green LED display**
   - Off: No voltage supply or fault
   - On: In operation
   - Press button: Switches on angle of rotation adaptation followed by standard operation

3. **Push-button and yellow LED display**
   - Off: Standard operation
   - On: Adaptation or synchronising process active
   - Press button: No function

4. **Gear disengagement switch**
   - Press button: Gear disengaged, motor stops, manual override possible
   - Release button: Gear engaged, synchronisation starts, followed by standard operation

#### Check voltage supply connection

- a) Off and On
- b) Blinking and Blinking
  - Check the supply connections.
  - Possibly 1 and 3 are swapped over.
